

Our Mission

Power-Block is an upcoming tech company that strives to protect batteries from damage via overcharging. Over time batteries can be degraded by constantly charging them to full capacity. Our mission is to empower everyday customers to protect and care for their devices.

Our Product

Power-Block's product is a simple and bluetooth connected intermediary between the charger itself and the item's. Conneted via bluetooth the consumer has the option to regulate how much charge is flowing to battery and protect it from overcharge damage; all from an app on their phone.

Uses

Our product works best for smaller non-smart devices that cannot regulate their own batteries. Such devices include:

- **Speakers**
- **Headphones**
- **Electric Bikes**
- **Power Tools**
- **Flashlights**
- **Golf Carts**
